

CiviQ — Meet Nori

Your community support companion

A privacy-first community companion that helps people find nearby support and take a clear next step.

HACKATHON PROTOTYPE

SAN FRANCISCO DEMO

TRY THE LIVE DEMO >

Asking for help is harder than it should be

01

Support is fragmented

Food, housing, benefits, health, jobs, and legal help live in separate systems.

02

People don't know where to start

A moment of need often begins with a question, not the name of an organization.

03

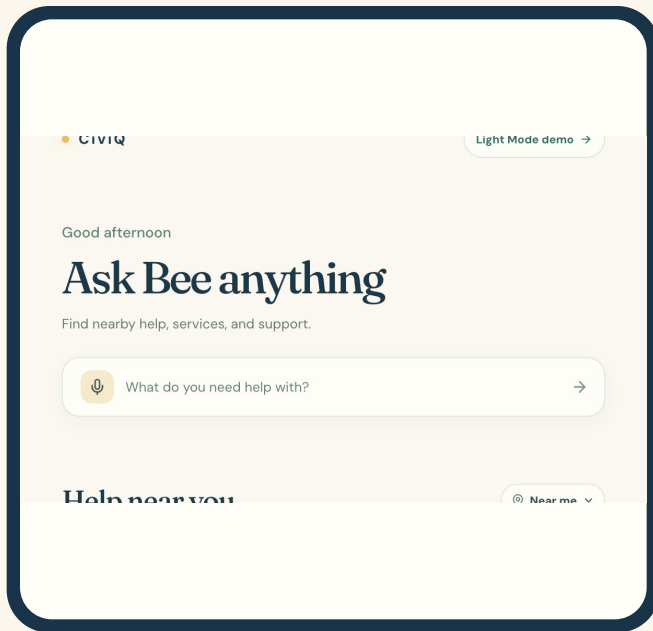

Forms turn needs into friction

Long, desktop-first flows feel overwhelming when someone needs a clear next step.

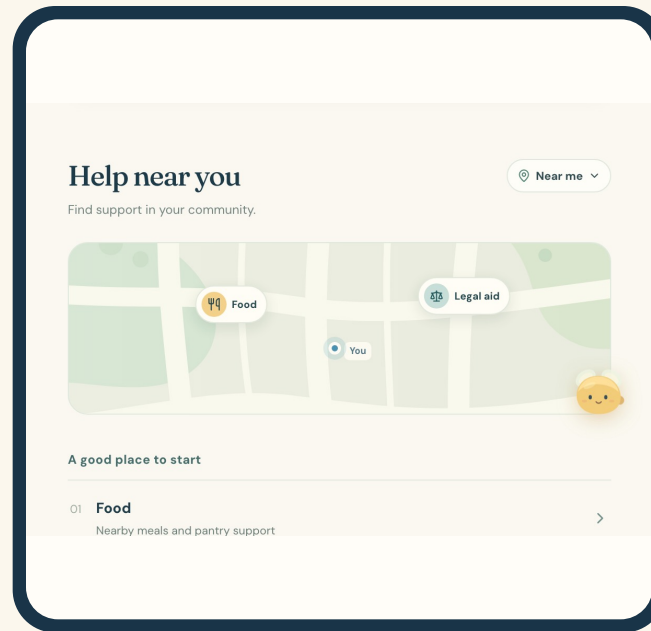

Meet Nori: one calm place to start

The current demo brings local discovery and task preparation into one mobile-first flow.

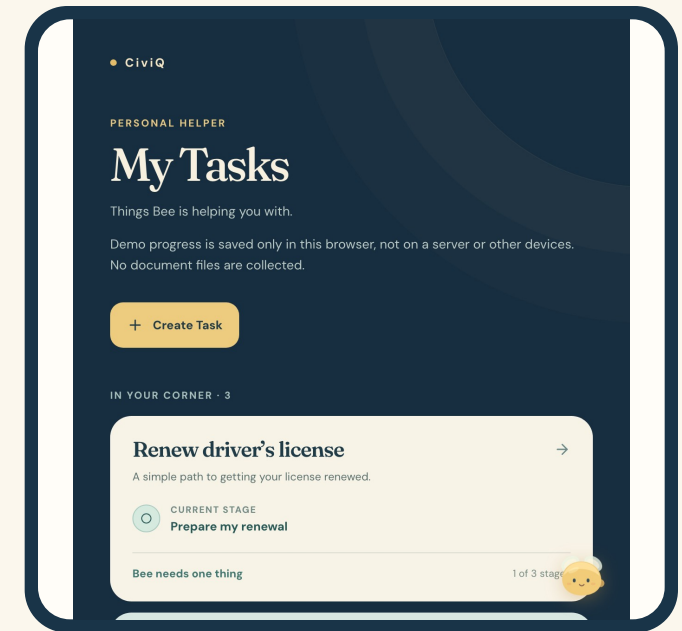

Ask in your own words

Start with a simple question or the voice demo.

Explore nearby support

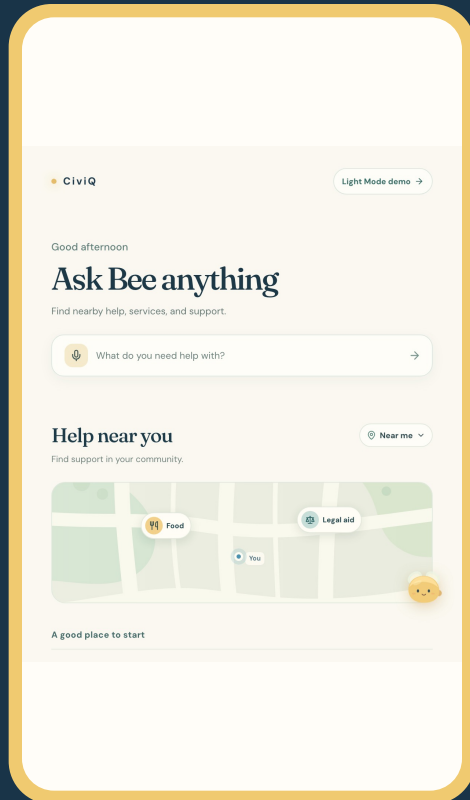

See Food and Legal aid categories near you.

Turn a need into a trackable task

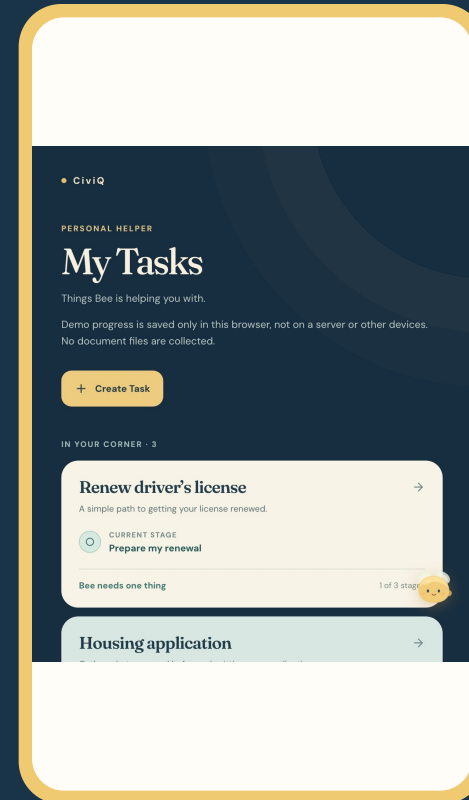

Create a task and follow its preparation stages.

One mobile companion, two ways to move forward

Local discovery

Ask for help, explore nearby categories, and see a simple community map.

Personal helper

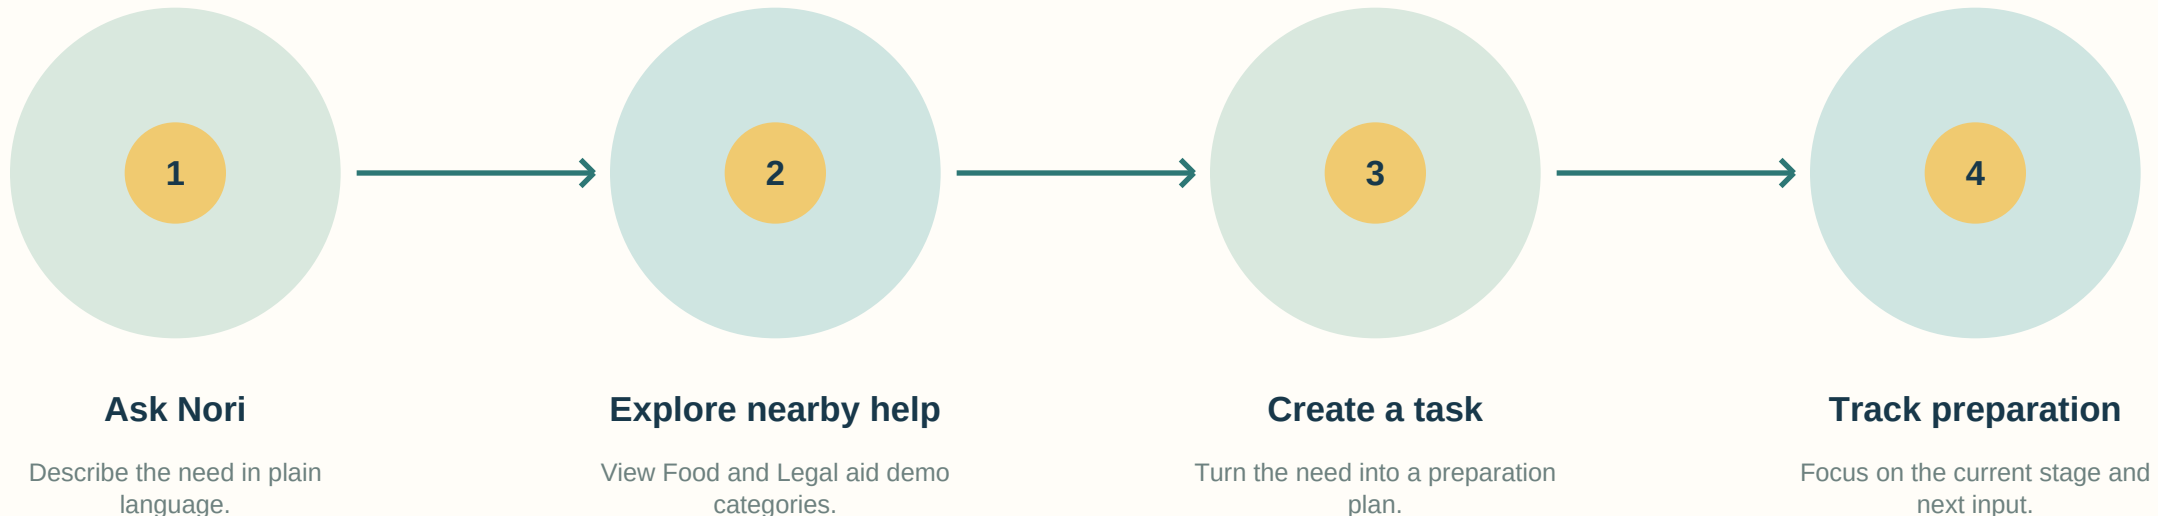

Create a task, see the current stage, and focus on one useful next step.

Mobile-first. No account required. Demo progress stays in this browser.

From "I need help" to a doable next step

MARIA'S STORY - SAN FRANCISCO

Maria needs food support this week. She does not know which organization to search first.

CiviQ does not submit applications, book appointments, or act outside the demo.

Built for a reliable, privacy-safe demo

What the public prototype demonstrably does today

01

Responsive mobile web UI

A focused interface for local discovery and personal tasks.

02

Deterministic demo flows

Repeatable task previews and stages keep the live demo dependable.

03

Browser-local task progress

Demo state is stored only in the current browser, not synced to a server.

04

No uploads or external submissions

Document buttons simulate progress and do not capture or send files.

Helpful only if it is trustworthy

- **Local-first progress**

Task progress stays in the current browser and is not synced across devices.

- **Minimal data**

The demo requires no account or profile to explore its core flow.

- **Simulated document steps**

Add document records a step only; it does not capture, upload, or store a file.

- **User-controlled actions**

The demo does not contact providers, submit forms, or book appointments.

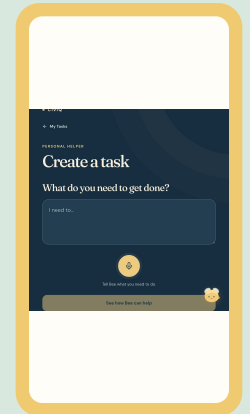

What works today - and what comes next

TODAY'S MVP

- Ask Nori entry point and voice demo
- Food and Legal aid nearby map
- My Tasks with three-stage progress
- Custom task preview and detail flow
- Browser-local state and simulated document steps

NEXT

- Verified San Francisco resource catalog
- Flower / multi-agent routing
- Accounts, cloud sync, and multilingual access
- Consent-based partner integrations

CiviQ turns a moment of need into a clear next step.

"Help may already exist. Nori helps people find where to start — and keep moving."
